Sales metrics cover valid positive-sales observations retained for analysis. Week numbers represent the source dataset’s week identifiers.

# Price Sensitivity

More negative elasticity estimates indicate greater price sensitivity. Values below  $-1$  indicate elastic demand; values between  $-1$  and  $0$  indicate inelastic demand. When the confidence interval crosses  $-1$ , the classification is uncertain.

| Product              | Size  | Elasticity | Lower CI | Upper CI | Observations | R Squared |
|----------------------|-------|------------|----------|----------|--------------|-----------|
| CHEERIOS             | 10 OZ | -0.79      | -1.25    | -0.34    | 29379        | 0.76      |
| CHEERIOS             | 15 OZ | -1.56      | -1.76    | -1.35    | 29679        | 0.83      |
| HONEY NUT CHEERIOS   | 14 OZ | -0.82      | -1.05    | -0.58    | 29537        | 0.81      |
| KELLOGGS CORN FLAKES | 18 OZ | -1.81      | -2.04    | -1.57    | 29787        | 0.84      |
| KELLOGGS CORN POPS   | 15 OZ | -1.28      | -1.70    | -0.85    | 29723        | 0.75      |
| KELLOGG'S FROSTED FL | 15 OZ | -1.64      | -2.21    | -1.07    | 29654        | 0.74      |
| KELLOGG'S FROSTED FL | 20 OZ | -1.84      | -2.22    | -1.46    | 29690        | 0.79      |
| KELLOGGS FRUIT LOOPS | 15 OZ | -1.77      | -2.13    | -1.42    | 29724        | 0.78      |
| KELLOGGS SPECIAL K   | 12 OZ | -1.20      | -1.56    | -0.83    | 29771        | 0.75      |
| KELLOGGS SPECIAL K   | 18 OZ | -1.47      | -1.95    | -1.00    | 29773        | 0.74      |

Estimates use the full modeling sample and describe observational relationships.

# Cheerios Pricing Scenario

Reference price: \$3.35. Approximate unit cost: \$2.824. Index 1.00 represents the baseline. Scenarios hold unit cost fixed and use the Cheerios-specific elasticity model.

| Change in Price▲ | Scenario Price | Quantity | Change in Revenue | Change in Gross Profit |
|------------------|----------------|----------|-------------------|------------------------|
| -0.10            | 3.02           | 1.18     | 0.06              | -0.57                  |
| -0.05            | 3.18           | 1.09     | 0.03              | -0.26                  |
| 0.00             | 3.35           | 1.00     | 0.00              | 0.00                   |
| 0.05             | 3.52           | 0.93     | -0.03             | 0.22                   |
| 0.10             | 3.69           | 0.86     | -0.06             | 0.41                   |

Modeled Revenue and Gross Profit by Price

Results are modeled scenarios, not causal forecasts. The highest gross-profit result occurs at the upper grid boundary; this does not establish an optimal price.
